

RAVI MAHTO

Cybersecurity Student • Full-Stack & AI-Agent Developer
ravimahto712@gmail.com | 8860620712 | Sushant University, Golf Course Road

PROFILE

Third-year BCA (Cybersecurity) student who builds and ships production applications rather than course projects alone. Independently designed, built, and deployed two live full-stack products — an AI-powered resume analyzer and an autonomous API-monitoring agent — covering frontend engineering, backend/API design, cloud deployment, auth, payments, and applied AI integration. Comfortable owning a product end-to-end: architecture, security, and shipping to real users.

EDUCATION

Bachelor of Computer Applications (BCA) — Cybersecurity Specialization 2023 – 2027 (Expected)

Sushant University, Golf Course Road, Gurugram

Currently in 3rd year. Coursework includes network security, secure application development, and applied programming.

PROJECTS

ATS Killer — AI Resume & JD Analyzer Live Product

React/Vite • Vercel Serverless API • Supabase • Razorpay • Gemini API

- Built and deployed a full-stack SaaS tool that scores resumes against job descriptions, citing specific resume lines against JD requirements.
- Implemented freemium model with anonymous-usage support (IP-based rate limiting) alongside authenticated paid tiers via Razorpay.
- Owned end-to-end security: server-side entitlement checks, signed Razorpay webhook verification, and per-user rate limiting.
- Reduced main JS bundle from 806KB to 68KB through route-based code-splitting and vendor chunking.
- Live at ats-killer-seven.vercel.app.

API Sentinel — Autonomous API-Breakage Detection Agent Live Product

Next.js • Supabase • GitHub App (OAuth) • Claude & Gemini APIs • Vercel Cron

- Built an AI agent that scans customer repositories for breaking changes in third-party APIs (Stripe SDK) and automatically opens a GitHub pull request with the fix.
- Designed the full pipeline: changelog ingestion, repo scanning, AI-driven patch generation, and automated PR creation, running on a daily cron in production.
- Implemented GitHub App-based authentication (JWT + installation tokens) for secure, scoped repository access without storing user credentials.
- Added self-serve onboarding: GitHub OAuth sign-in, repo connection flow, and a per-user dashboard with real-time scan/PR history.
- Shipped email notifications on successful auto-patch delivery via Resend.
- Live at api-sentinel-zeta.vercel.app.

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, SQL

Frontend: React, Vite, Next.js, Zustand

Backend & Infra: Node.js, Vercel Serverless Functions, Supabase (Postgres, Auth, RLS), Vercel Cron

Security: Auth & session management (NextAuth, OAuth), server-side authorization, webhook signature verification, Row-Level Security, rate limiting

AI/APIs: Claude API, Gemini API, GitHub App/REST API integration, applied prompt design for structured AI agents

Tools: Git/GitHub, GitHub Apps & Webhooks, Razorpay, Resend, CI/build tooling

ADDITIONAL

- Built and shipped two independent full-stack products from architecture through production deployment, without a team.
- Practiced in reading production build/security audits and fixing live bugs across payment, auth, and OAuth flows.
